PRANAY SHIT
PROBLEM STATEMENT

▶ Travel planning today is often fragmented and inefficient. Users have to switch between multiple platforms — flight booking websites, hotel apps, itinerary planners, and review sites — just to organize a single trip. This creates friction and makes the process time-consuming, especially for users who:

▶ Aren't tech-savvy or are new to travel apps

▶ Want personalized recommendations

▶ Need quick responses without browsing endless options

▶ Prefer mobile-first or WhatsApp-based interactions

▶ In addition, most travel assistants lack real-time, conversational interfaces that can understand user intent and respond in natural language. Users often find themselves overwhelmed by options rather than being guided through their journey.

▶ There is a strong need for a **smart, interactive, and unified travel assistant** that:

▶ Works within familiar platforms like **WhatsApp**

▶ Leverages **AI and real-time APIs** (flights, hotels, etc.)

▶ Understands and responds to user queries in a conversational tone

▶ Helps users **plan, book, and manage** trips in one place

💡 Solutions: Meet TravelMate – Your Personal AI Travel Companion

▶ To address the problems faced by modern travelers, we present to you **TravelMate** – an AI-powered travel assistant accessible directly via WhatsApp. TravelMate offers seamless travel planning, discovery, and real-time updates – all through natural language conversation.

🌟 **Key Features of TravelMate – AI Travel Agent Bot**

Multi-Channel Accessibility

Works seamlessly across:
- ✅ WhatsApp (via Twilio)
- ✅ Web (chat interface or QR-triggered)

🧠 **AI-Powered Contextual Memory**

Offers **context-aware recommendations** using LangChain + memory buffer

✈️ **Real-Time Travel Assistance**

⚙️ Tech Stack

Layer	Technology Used
Frontend	React.js (chat UI), Tailwind CSS
Backend	FastAPI, LangChain, Gemini, Twilio WhatsApp
Data/API	Amadeus, Google Places
Deployment	Render (auto deploy from GitHub)
Storage/Logs	JSON + Analytics Dashboard (React)

7/23/2025

⚠️ Problems Faced

Due to limited time during the hackathon, we were **unable to fully implement the Admin Dashboard** with analytics and detailed logging features.

Designing prompt templates that worked seamlessly with both Gemini and OpenAI for diverse intents (flights, trains, hotels) was non-trivial.

Required multiple iterations to avoid hallucinated or irrelevant outputs.

Testing with multiple users was challenging, impacting broad validation.

Faced delays in fetching accurate real-time data due to **rate limits** or partial documentation.

FUTURE SCOPE

🌍 **Global Expansion with Multi-Language Support**

🤖 **Smarter AI Conversations**

👨‍💻 **Admin Dashboard (Planned)**

📞 **Advanced IVR + Voice Interface**

📅 **Real-Time Booking + Payment Integration**

✈️ **Smart Itinerary Generator**

📈 **AI-Driven Recommendation System**
